Cinemartin Denoiser makes use of powerful editing techniques to remove noise and grain from videos recorded with DSLR cameras, delivering impressive results. Aiming to meet the requirements of all users, it also integrates video encoding capabilities with support for various output formats. The purpose of Cinemartin Denoiser is to provide a standalone and reliable tool for video denoising that can act as a redoubtable competitor to popular video editing suites while keeping things as simple as possible. As such, it does not require installation and its interface comprises all the options within a single window, providing one-click access to all its functions. Two denoising mechanisms and preset configurations What makes Cinemartin Denoiser obtain great results is its double denoising mechanism. Practically, your image is processed twice using either one of the available presets (soft, medium or high denoise) or custom settings. If you decide not to use the presets and configure the denoising settings on your own, note that you can easily adjust the Luma1, Luma2, Chroma1, Chroma2 parameters, as well as the denoiser depth. Furthermore, you can tamper with other playback options such as the gamma, brightness, contrast and saturation levels. Preview video before encoding Cinemartin Denoiser features previewing options, enabling you to view the result of your adjustments prior to applying the changes and compare the output to the original video, since they are displayed side-by-side. The compatible output presets include Apple Prores variants, DNxHD, H.264 and H.265 formats. The converter relies on a powerful and robust video compression algorithm and the latest codecs to ensure optimum playback quality. What's new Version 2.5.0 (Sept. 15th, 2019) - Fixes a bug that prevented users from accessing the File and Edit functions.- Rediscovers the lost image file when cancelling the video conversion.- Improves the overall performance.
